2 Related Work

Winery (Kopp et al 2013) is a graphical **modeling** tool. The whole idea of TOSCA is explained by Binz et al (2012).

3 LaTeX Hints

Listings 1 and 2 show listings typeset using the `lstlisting` environment.

Cleveref – Intelligent cross-referencing demonstration: `Cref` at beginning of sentence, `cref` in all other cases. Look at the L^AT_EX source for the effects. Figure 1 shows a simple fact, although Fig. 1 could also show something else. Table 1 shows a simple fact, although Table 1 could also show something else. Section 1 shows a simple fact, although Sect. 1 could also show something else.

Brackets work as designed: `<test>` One can also input backquotes in verbatim text: ``test``.

The symbol for powerset is now correct: \wp and not a Weierstrass p (\wp).

1. All these items... 2. ...appear in one line 3. This is enabled by the `paralist` package.

Please use the “`qq` command” or the “`enquote` command” to quote something. “something in quotes” using plain tex syntax also works.

You can now write words containing hyphens which are hyphenated (application-specific) at other places. This is enabled by an additional configuration of the `babel` package. In case you write “application-specific”, then the word will only be hyphenated at the dash. You can also write application-specific, but this is much more effort.

The words “workflow” and “dwarflike” can be copied from the PDF and pasted to a text file.

Numbers can written plain text (such as 100), by using the `siunitx` package like that: 100 km h^{-1} , or by using plain L^AT_EX (and math mode): $100\frac{\text{km}}{\text{h}}$.
